Writing on

Junior

Designation of Operating Parts

The dash lines refer to those parts which are invisible on the illustration of the machine.

Number on the illustration	Described on page	Number on the illustration	Described on page
1 Space bar	13	14 Left-hand margin stop	11
2 Left and right-hand shift key	13	15 Card holder	16
3 Shift lock	13	16 Left and right-hand line finder scales	16
4 Ribbon adjustment	18	17 Paper support	10
5 Margin release	13	18 Platen	16
6 Line space lever	14	19 Right-hand margin stop	11
7 Ribbon spool	17	20 Paper deflector	8
8 Ribbon reverse actuator	17	21 Paper release	9
9 Platen knob	16	22 Tabulator stops	19
10 Line space regulator	11	23 Carriage lock	7
11 Carriage release lever	14	24 Back spacer	13
12 Platen release	15	25 Tabulator key	19
13 Paper holder	8		

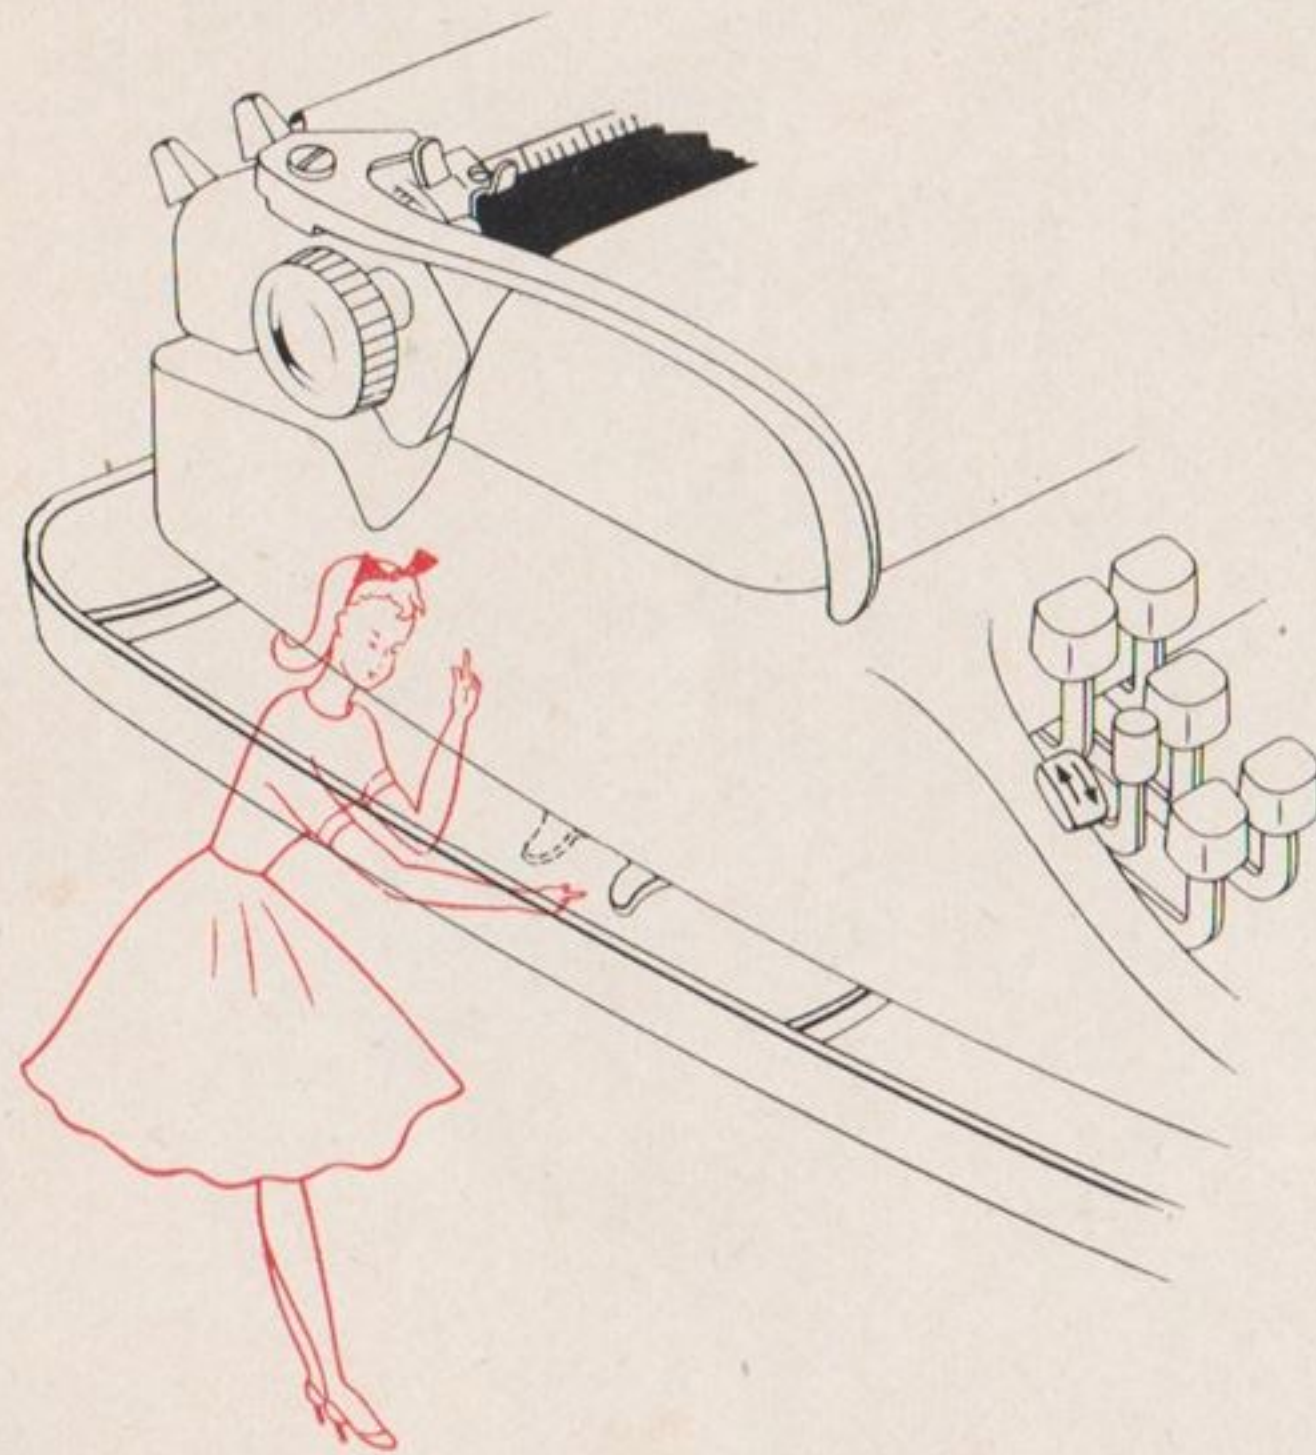

Although many of you will be acquainted with our "Junior" we nevertheless wish to give you still a few hints in order to familiarize you with some details.

You will find	on page		on page
Case bottom	6	carriage release lever	14
Type locking	7	Line-space disengaging	
Carriage lock	7	lever	15
Paper table	8	Positioning scales	16
Paper bail	8	Cardholder	16
Paper release lever	9	Ribbon	17
Paper supporting bar	10	Ribbon reverse actuator	17
Marginal stop	11	Ribbon indicator	18
Line-space regulator	11	Tabulator	19
Keyboard	12/13	Maintenance	20
Line-space lever	14		

Confide in "Junior", the machine will show you everything by itself.

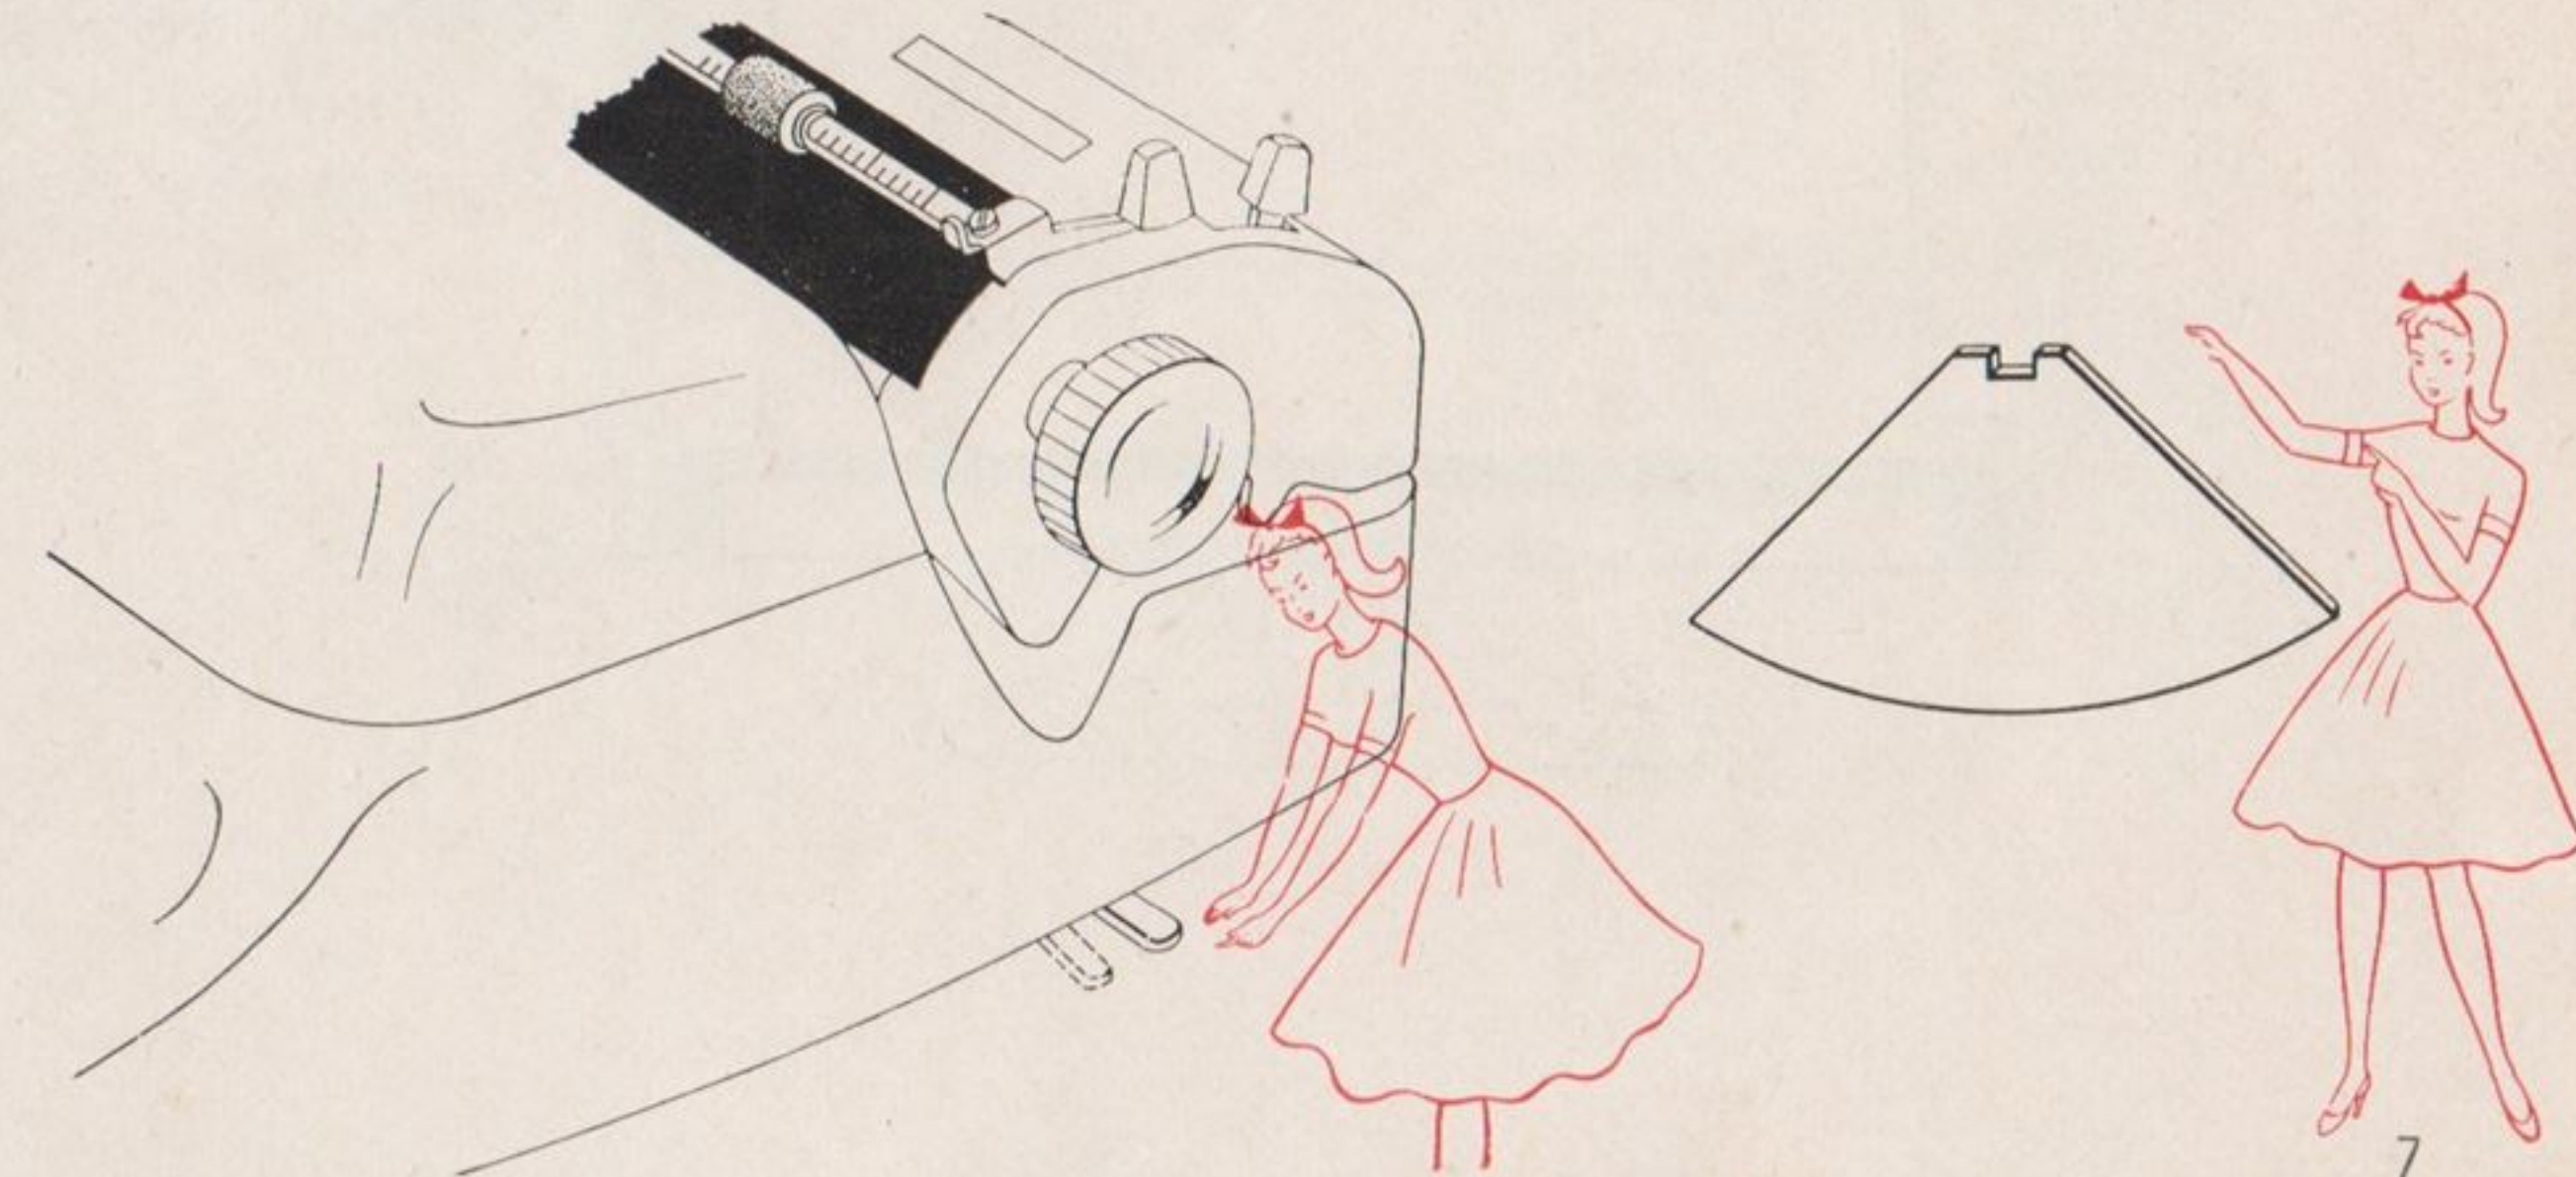

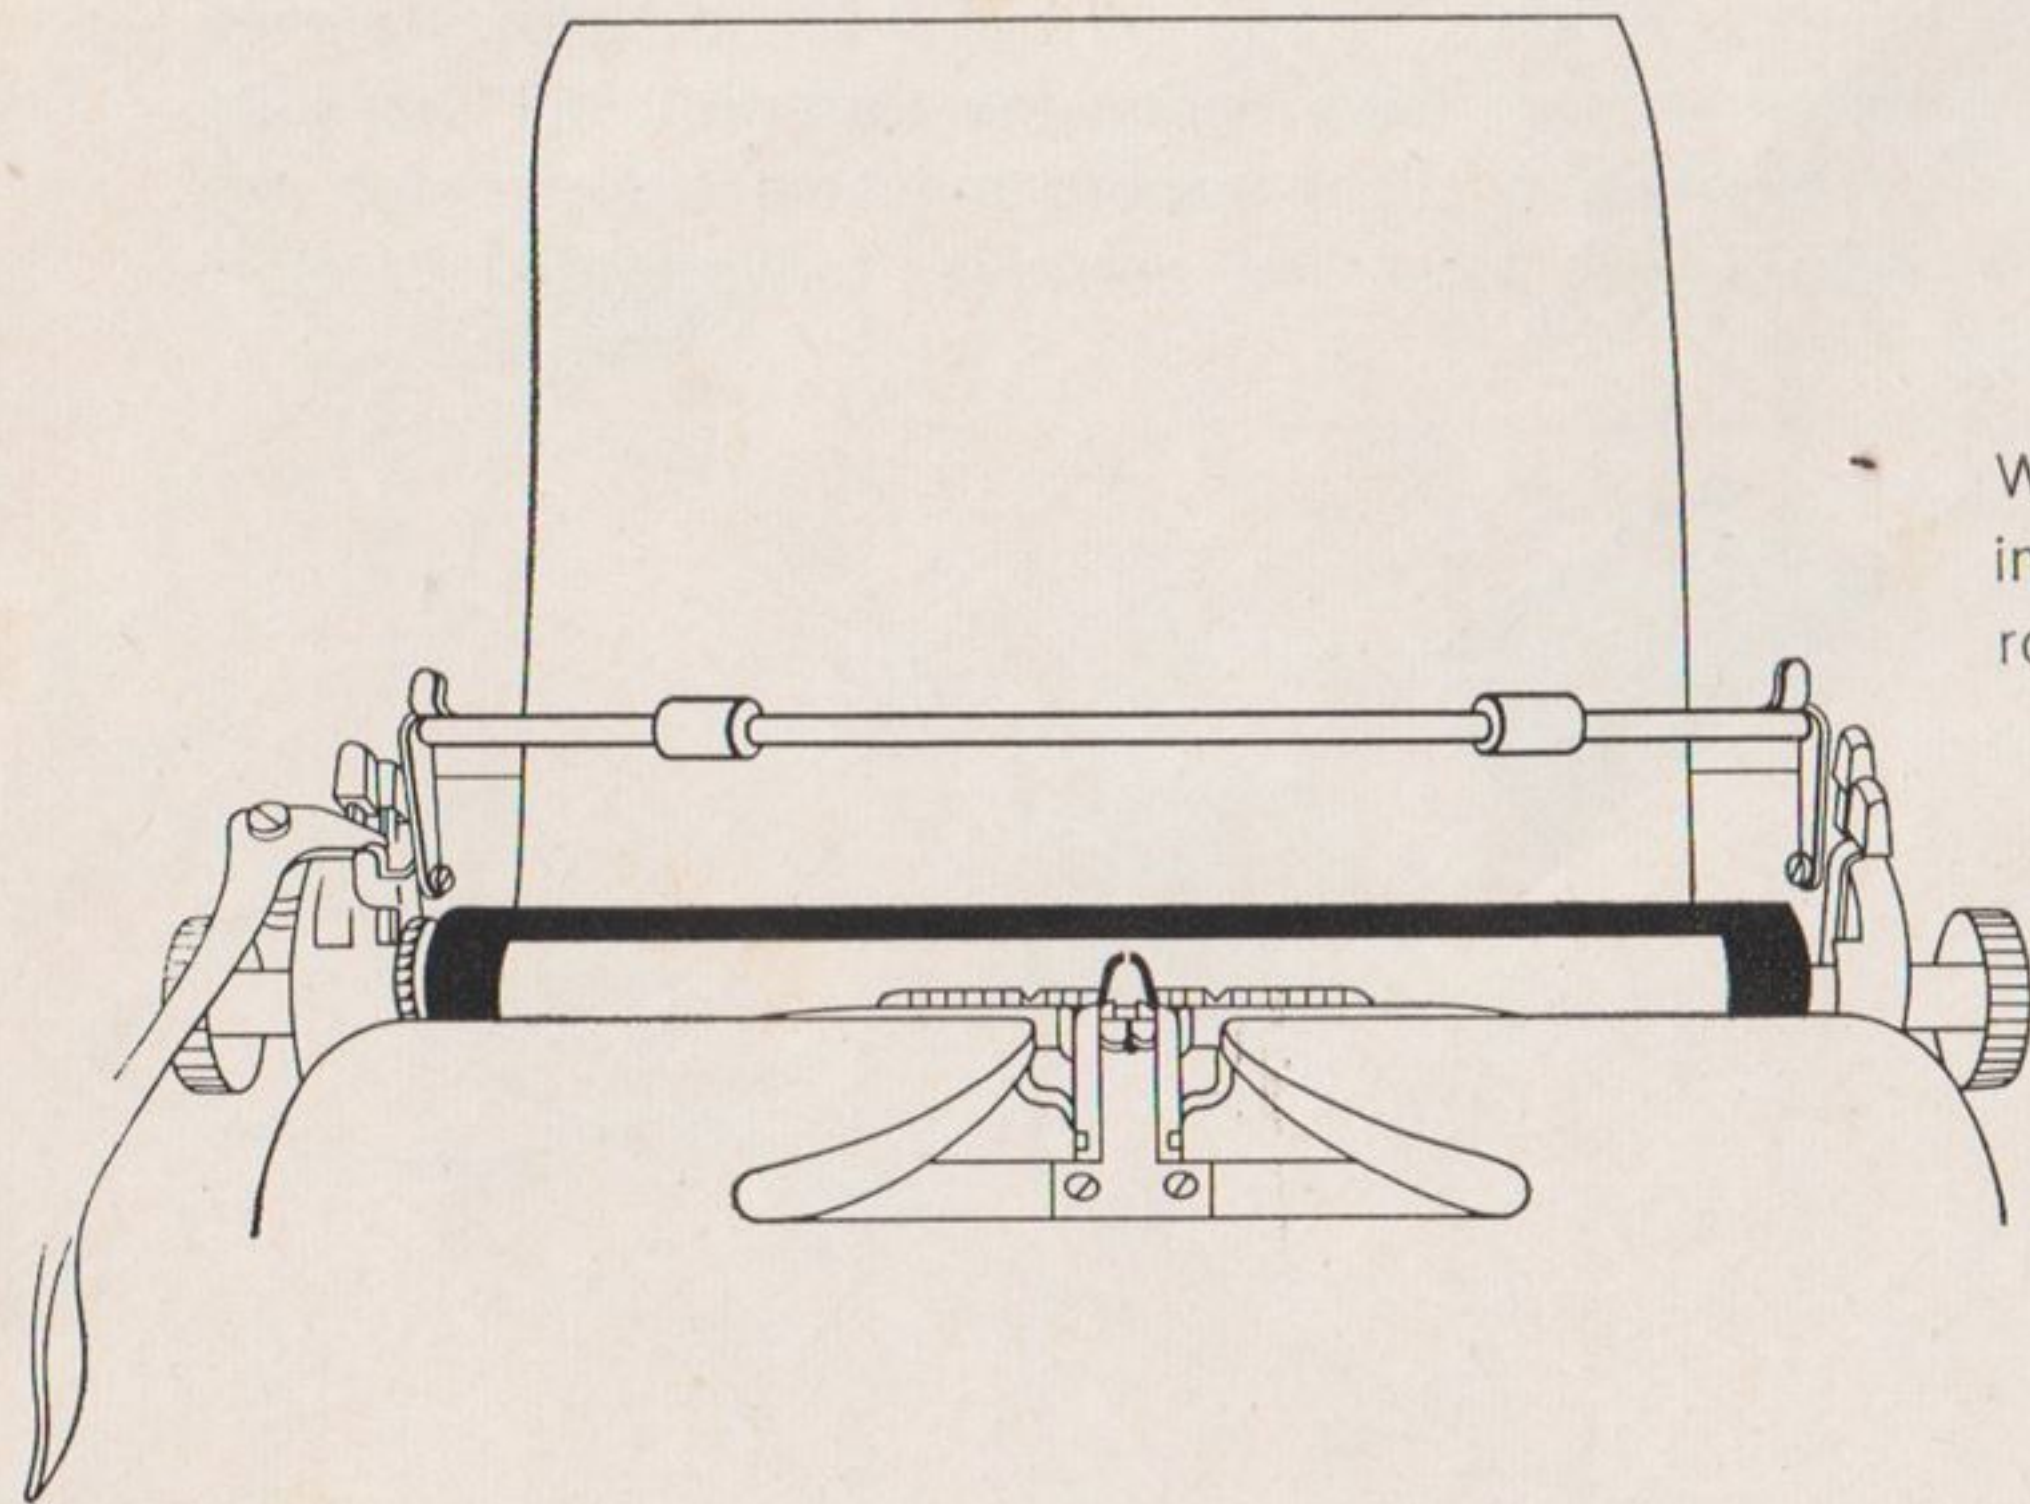

It is of course also possible to write on "Junior" in semi-packed condition i.e. by taking off merely the case-cover. You may, however, remove as well the case bottom. All you have to do is to push the two clamping levers to the rear and "Junior" can be lifted off.

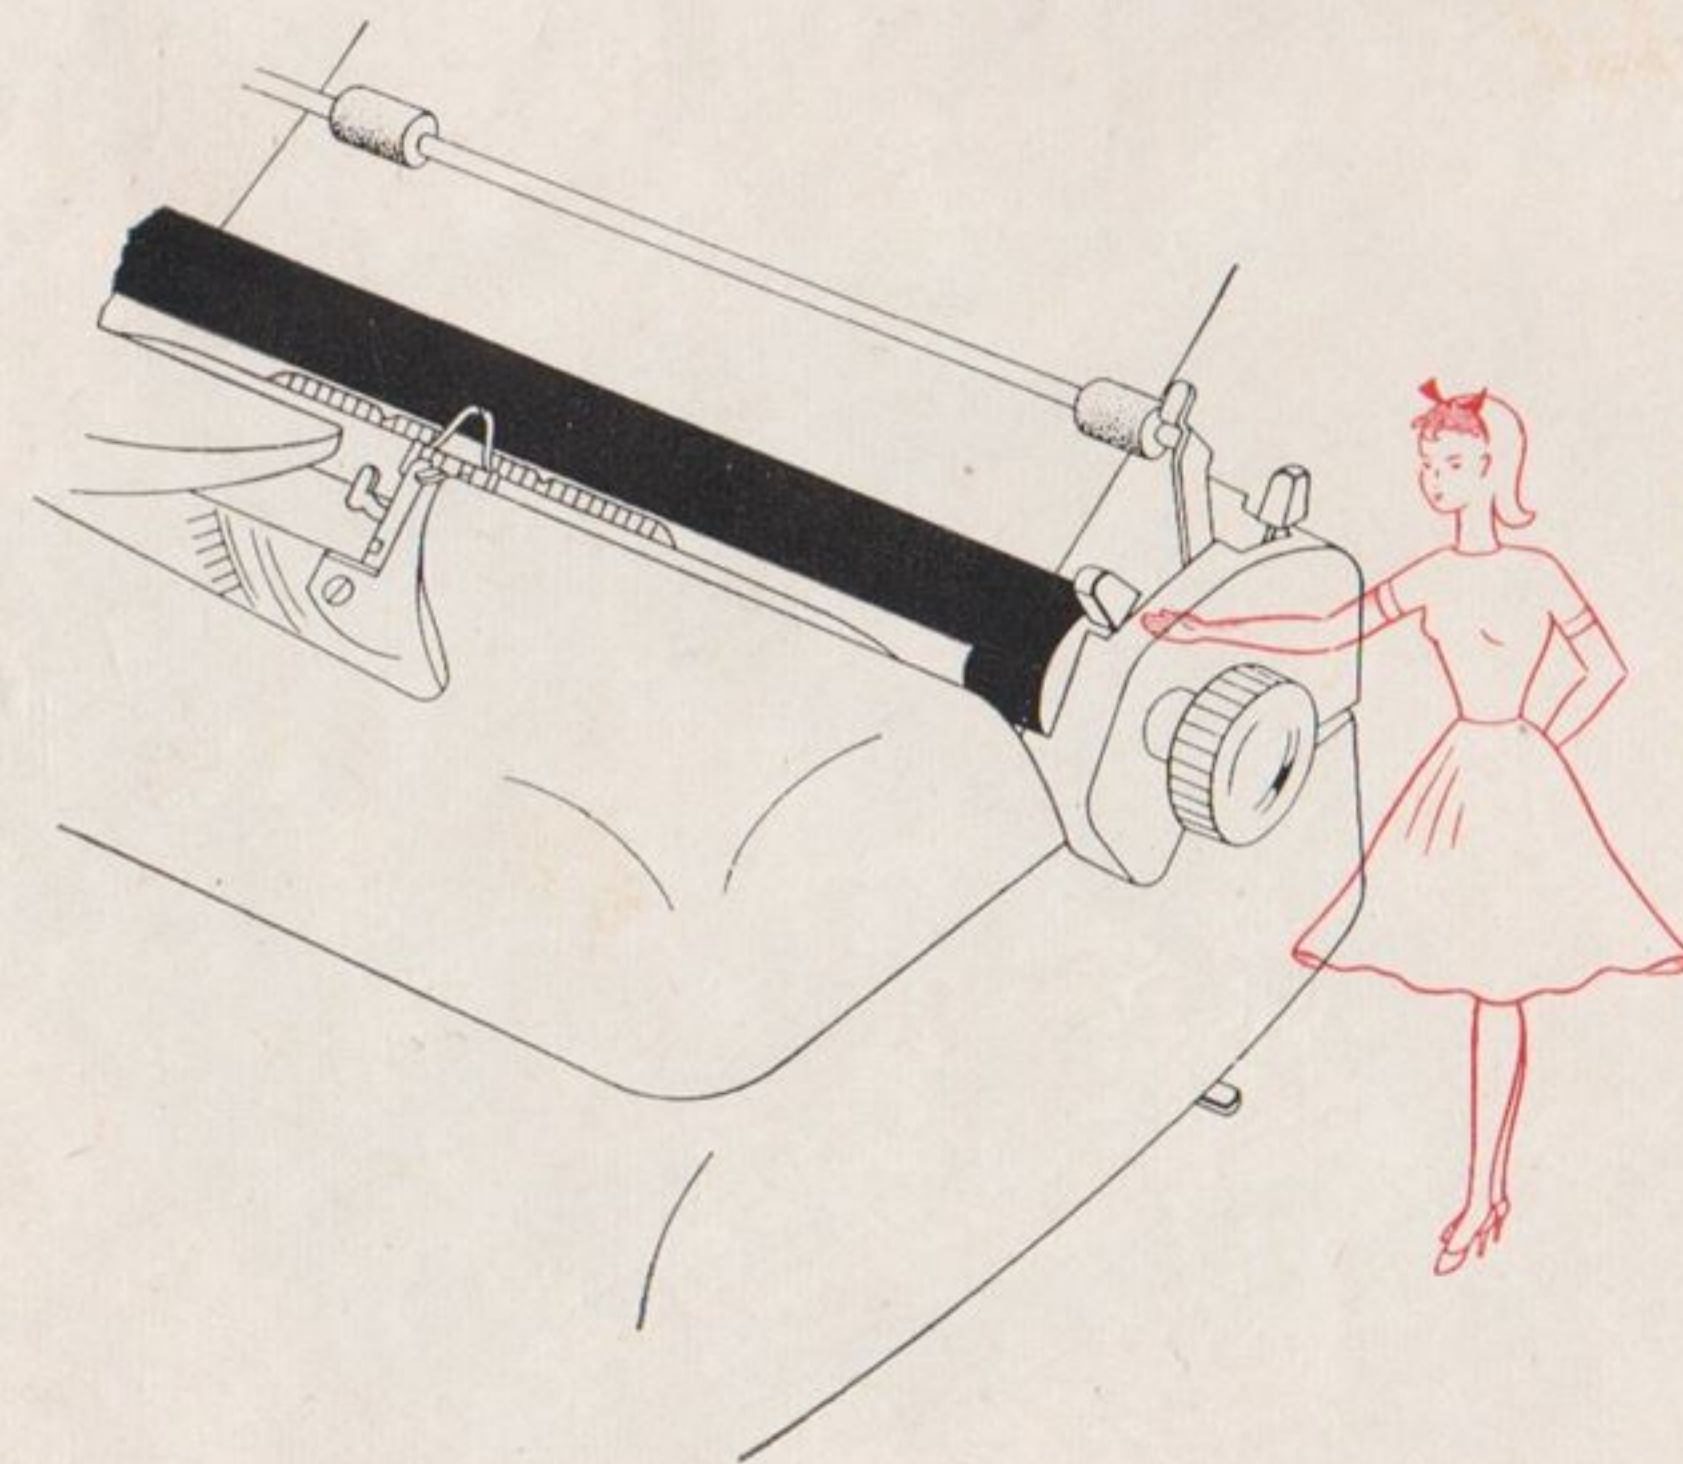

The machine remains immovable?

There are good reasons for it as the typewriter is expected "not to take things into its own hands" as long as you do not wish to write. Remove the type-bar locking which secures them during the transport, but first take off the case cover by exerting a slight upward movement. Now push the small lever on the right, which locks the carriage, forward and "Junior" is ready for writing.

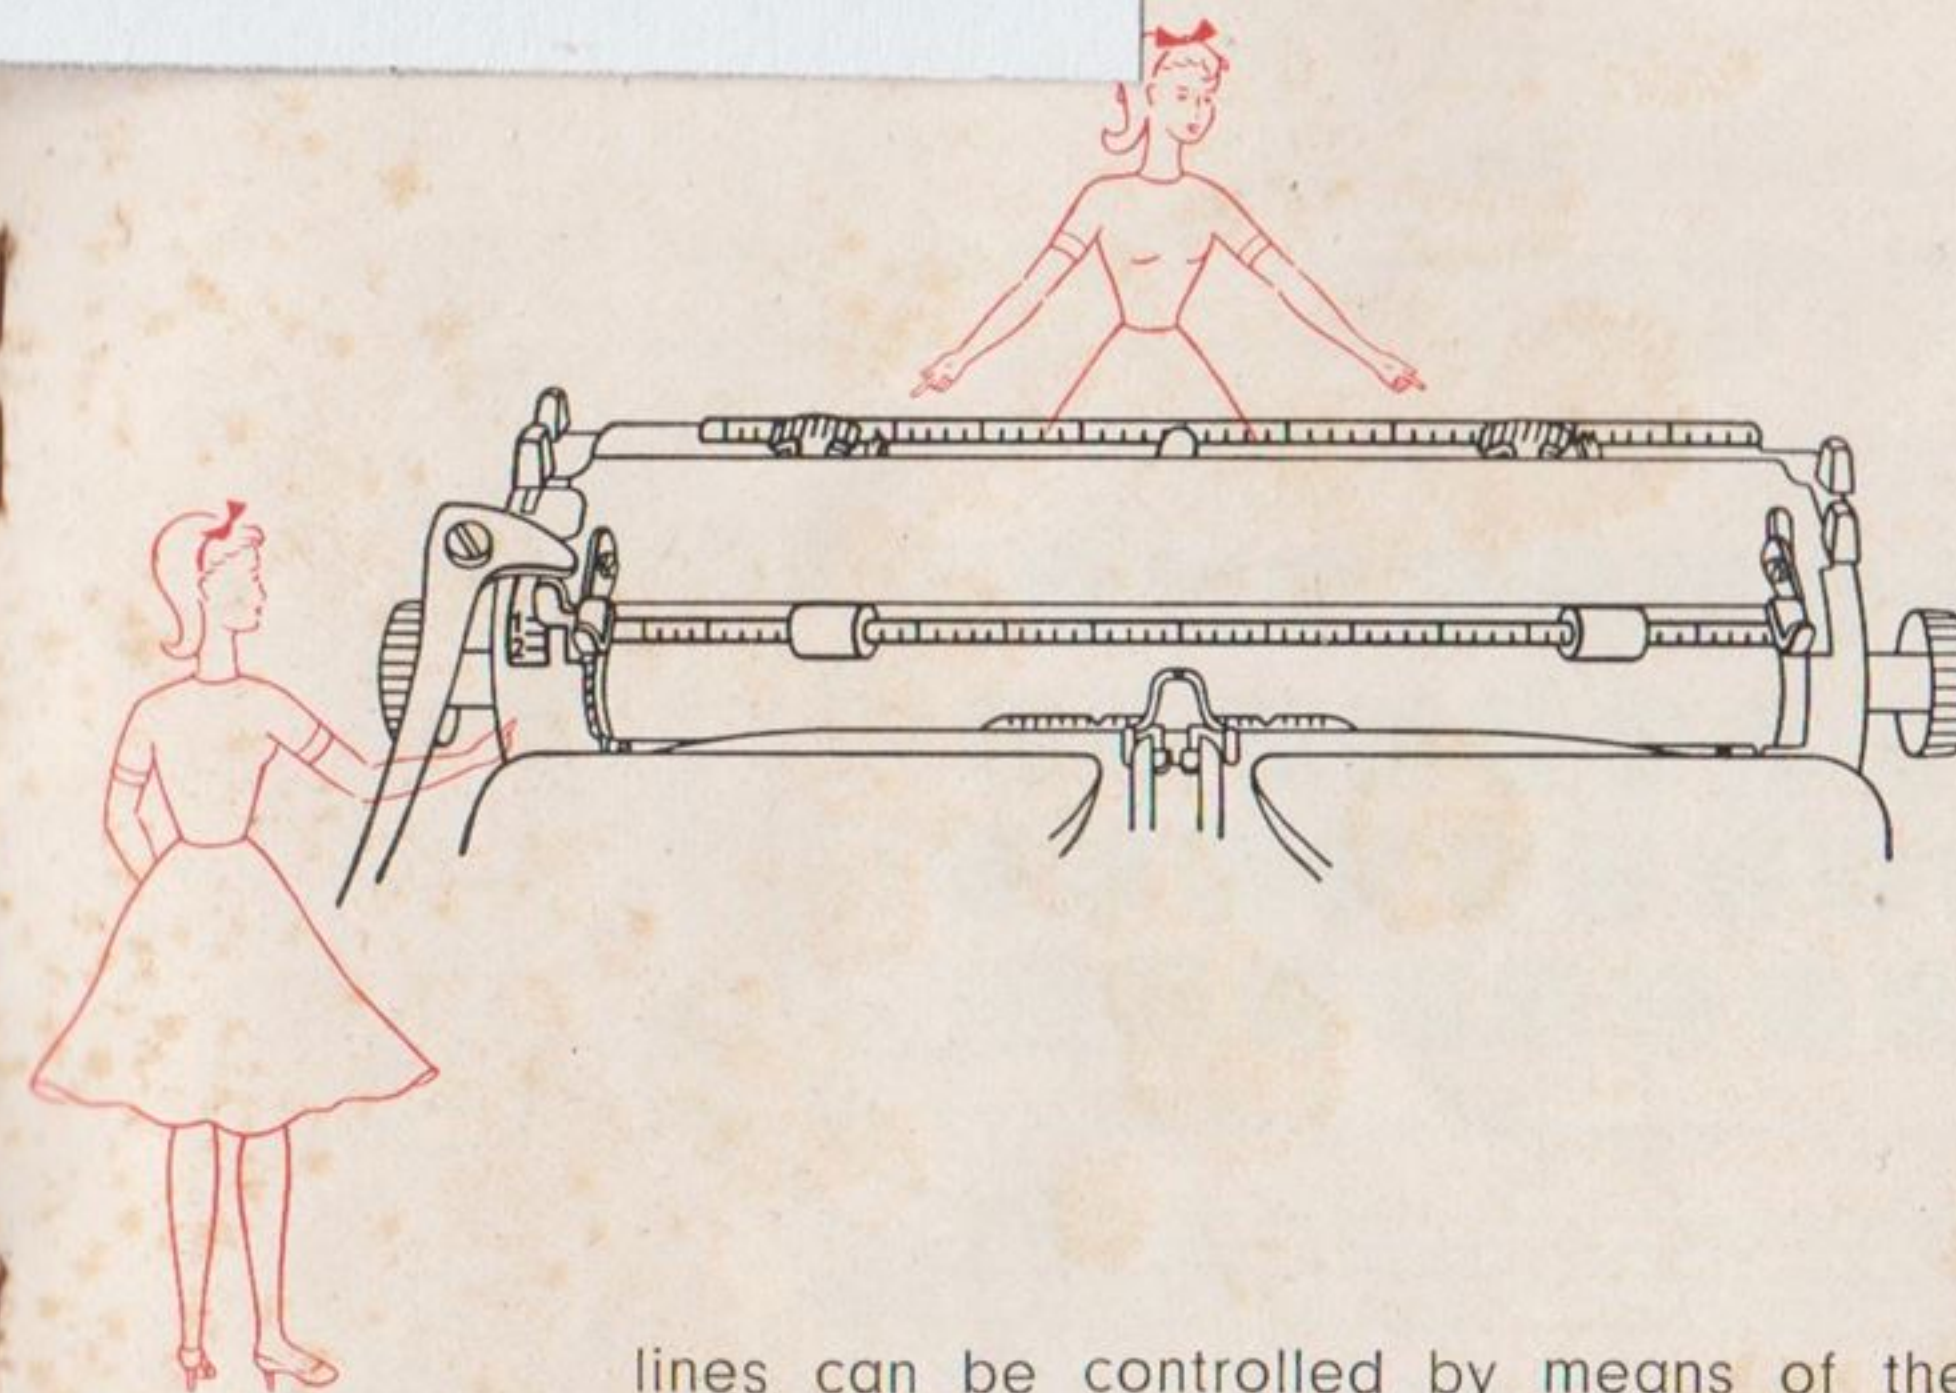

When inserting the paper in front of the paper table raise also the paper bail.

Should the paper not be aligned properly, make use of the paper-release lever. Align the edge of the paper according to the positioning scales. After correction don't forget to push back the paper-release lever.

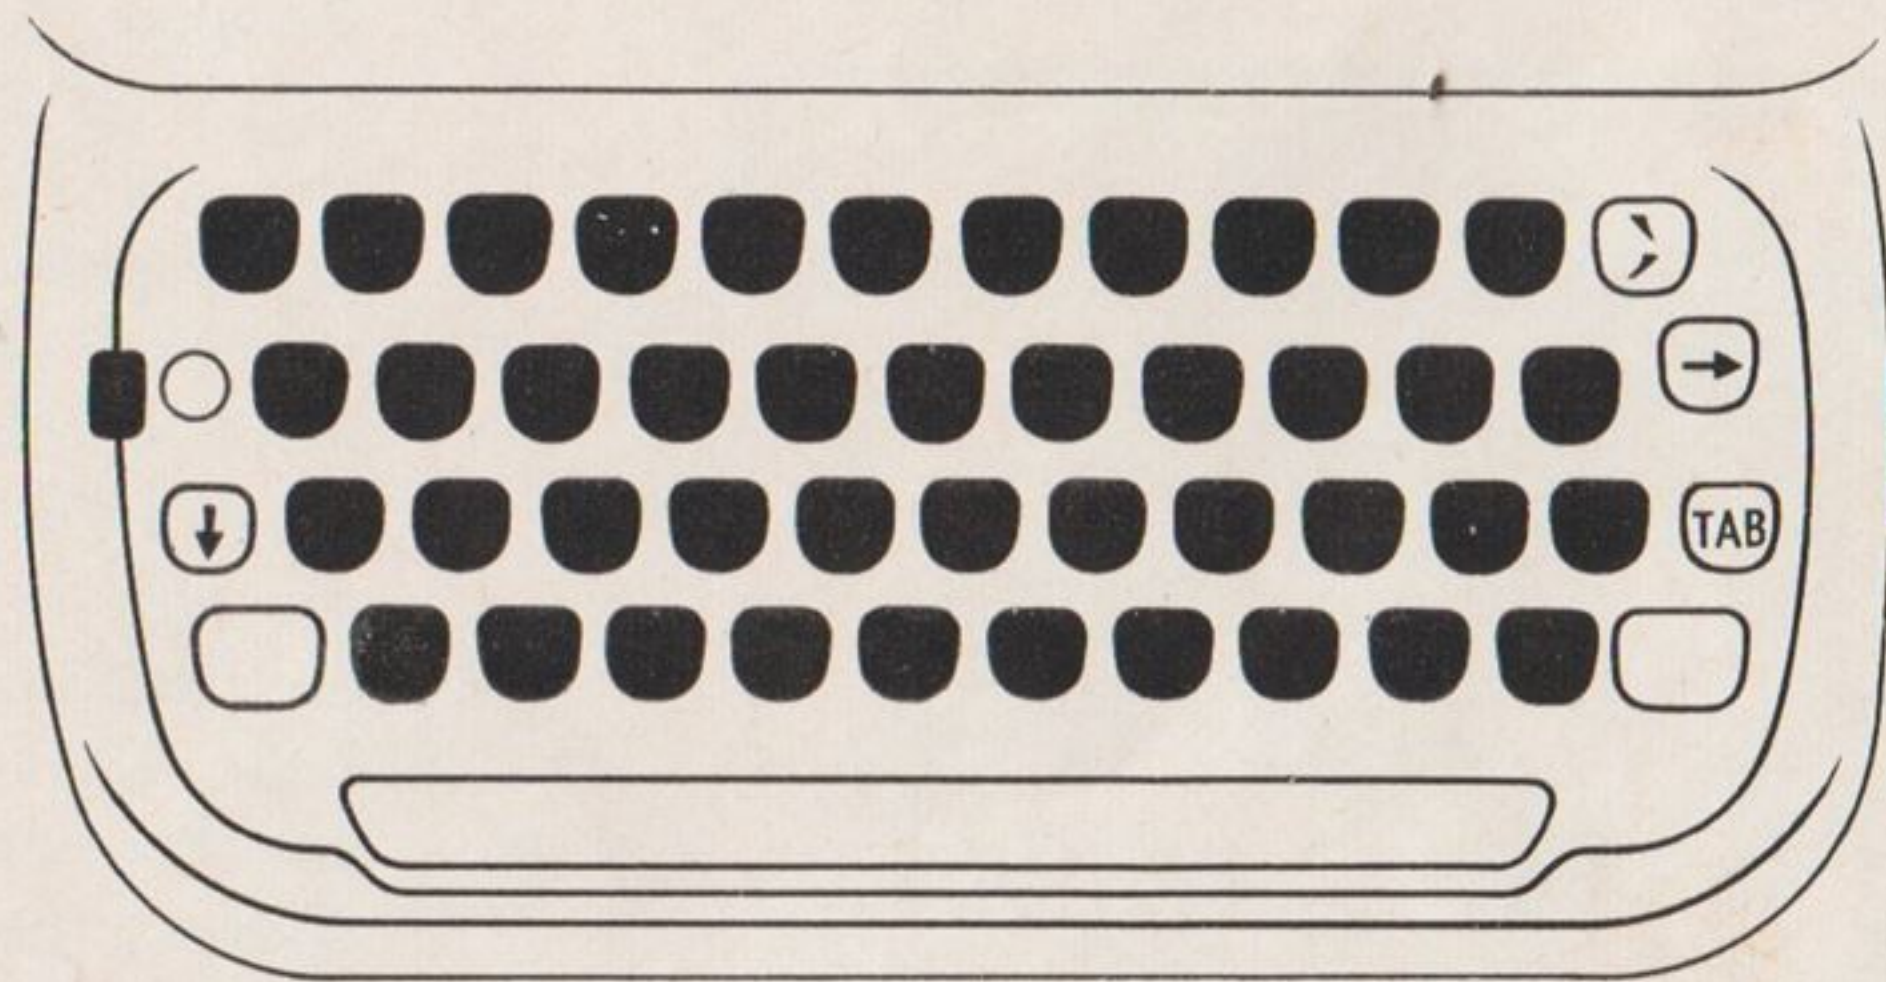

The paper supporting bar which proves to be very useful during the writing, is shown in the opposite illustration.

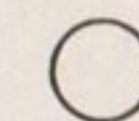

lines can be controlled by means of the scales engraved on the paper holder and the margin stop which coincide exactly with each other.

An essential matter!

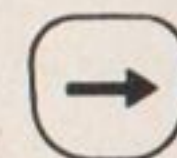

You attach no doubt much importance to letters showing the sign of a cultivated personality. This all depends on a pretty get-up of lines and spaces. The two margin stops will help you to determine the beginning and the end of a writing line, and the line-space regulator will allow you to set the desired regular spaces. The length of the

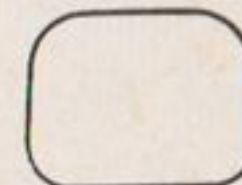

A short look still at the keyboard:

Margin release - To type outside either stops, the margin release key should be depressed to allow the carriage to pass the stops.

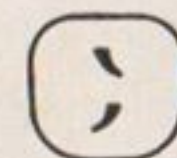

Backspacer — Moves the carriage by 1 space to the right.

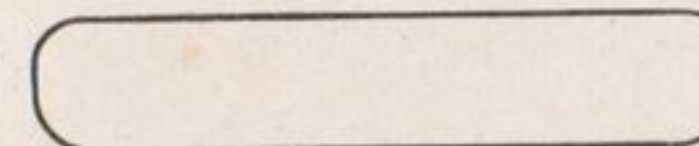

Shift key - left and right, in case capitals or symbols are to be typed.

Shift key lock - for permanent shift, by lightly depressing the left-hand shift key, the shiftlock is released.

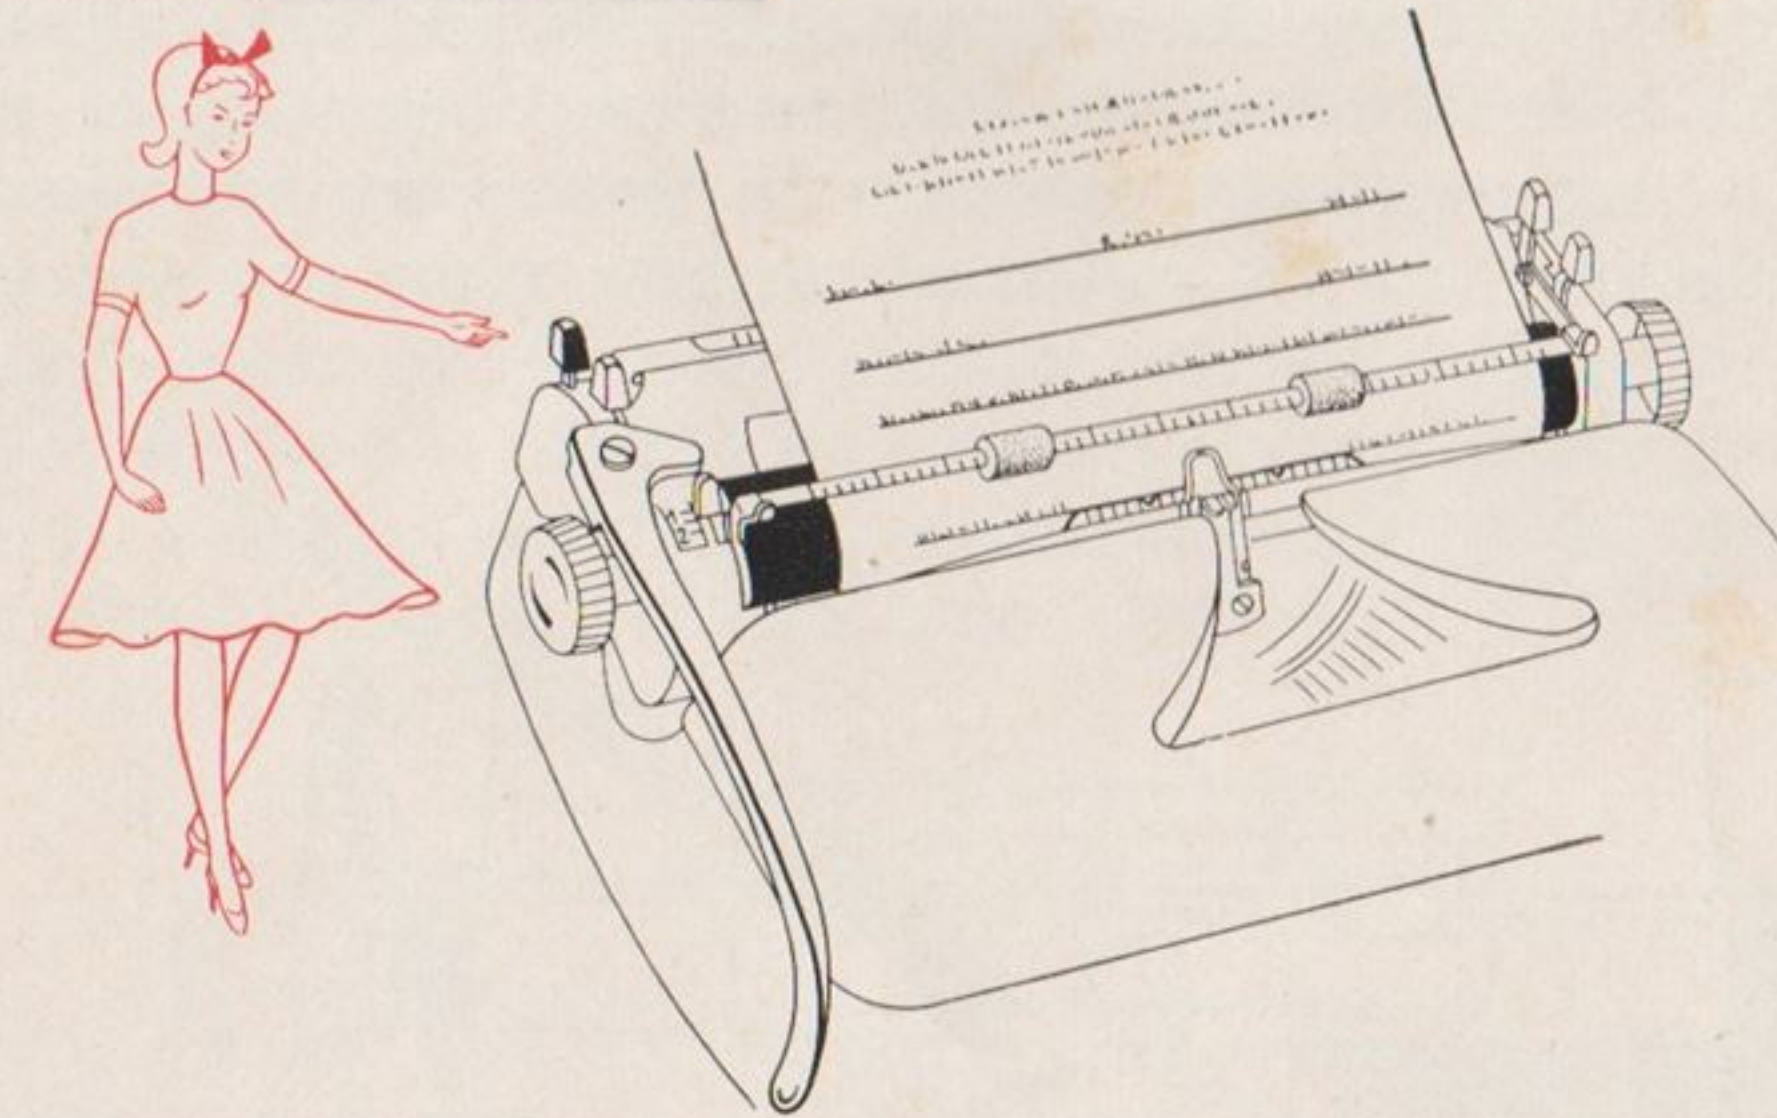

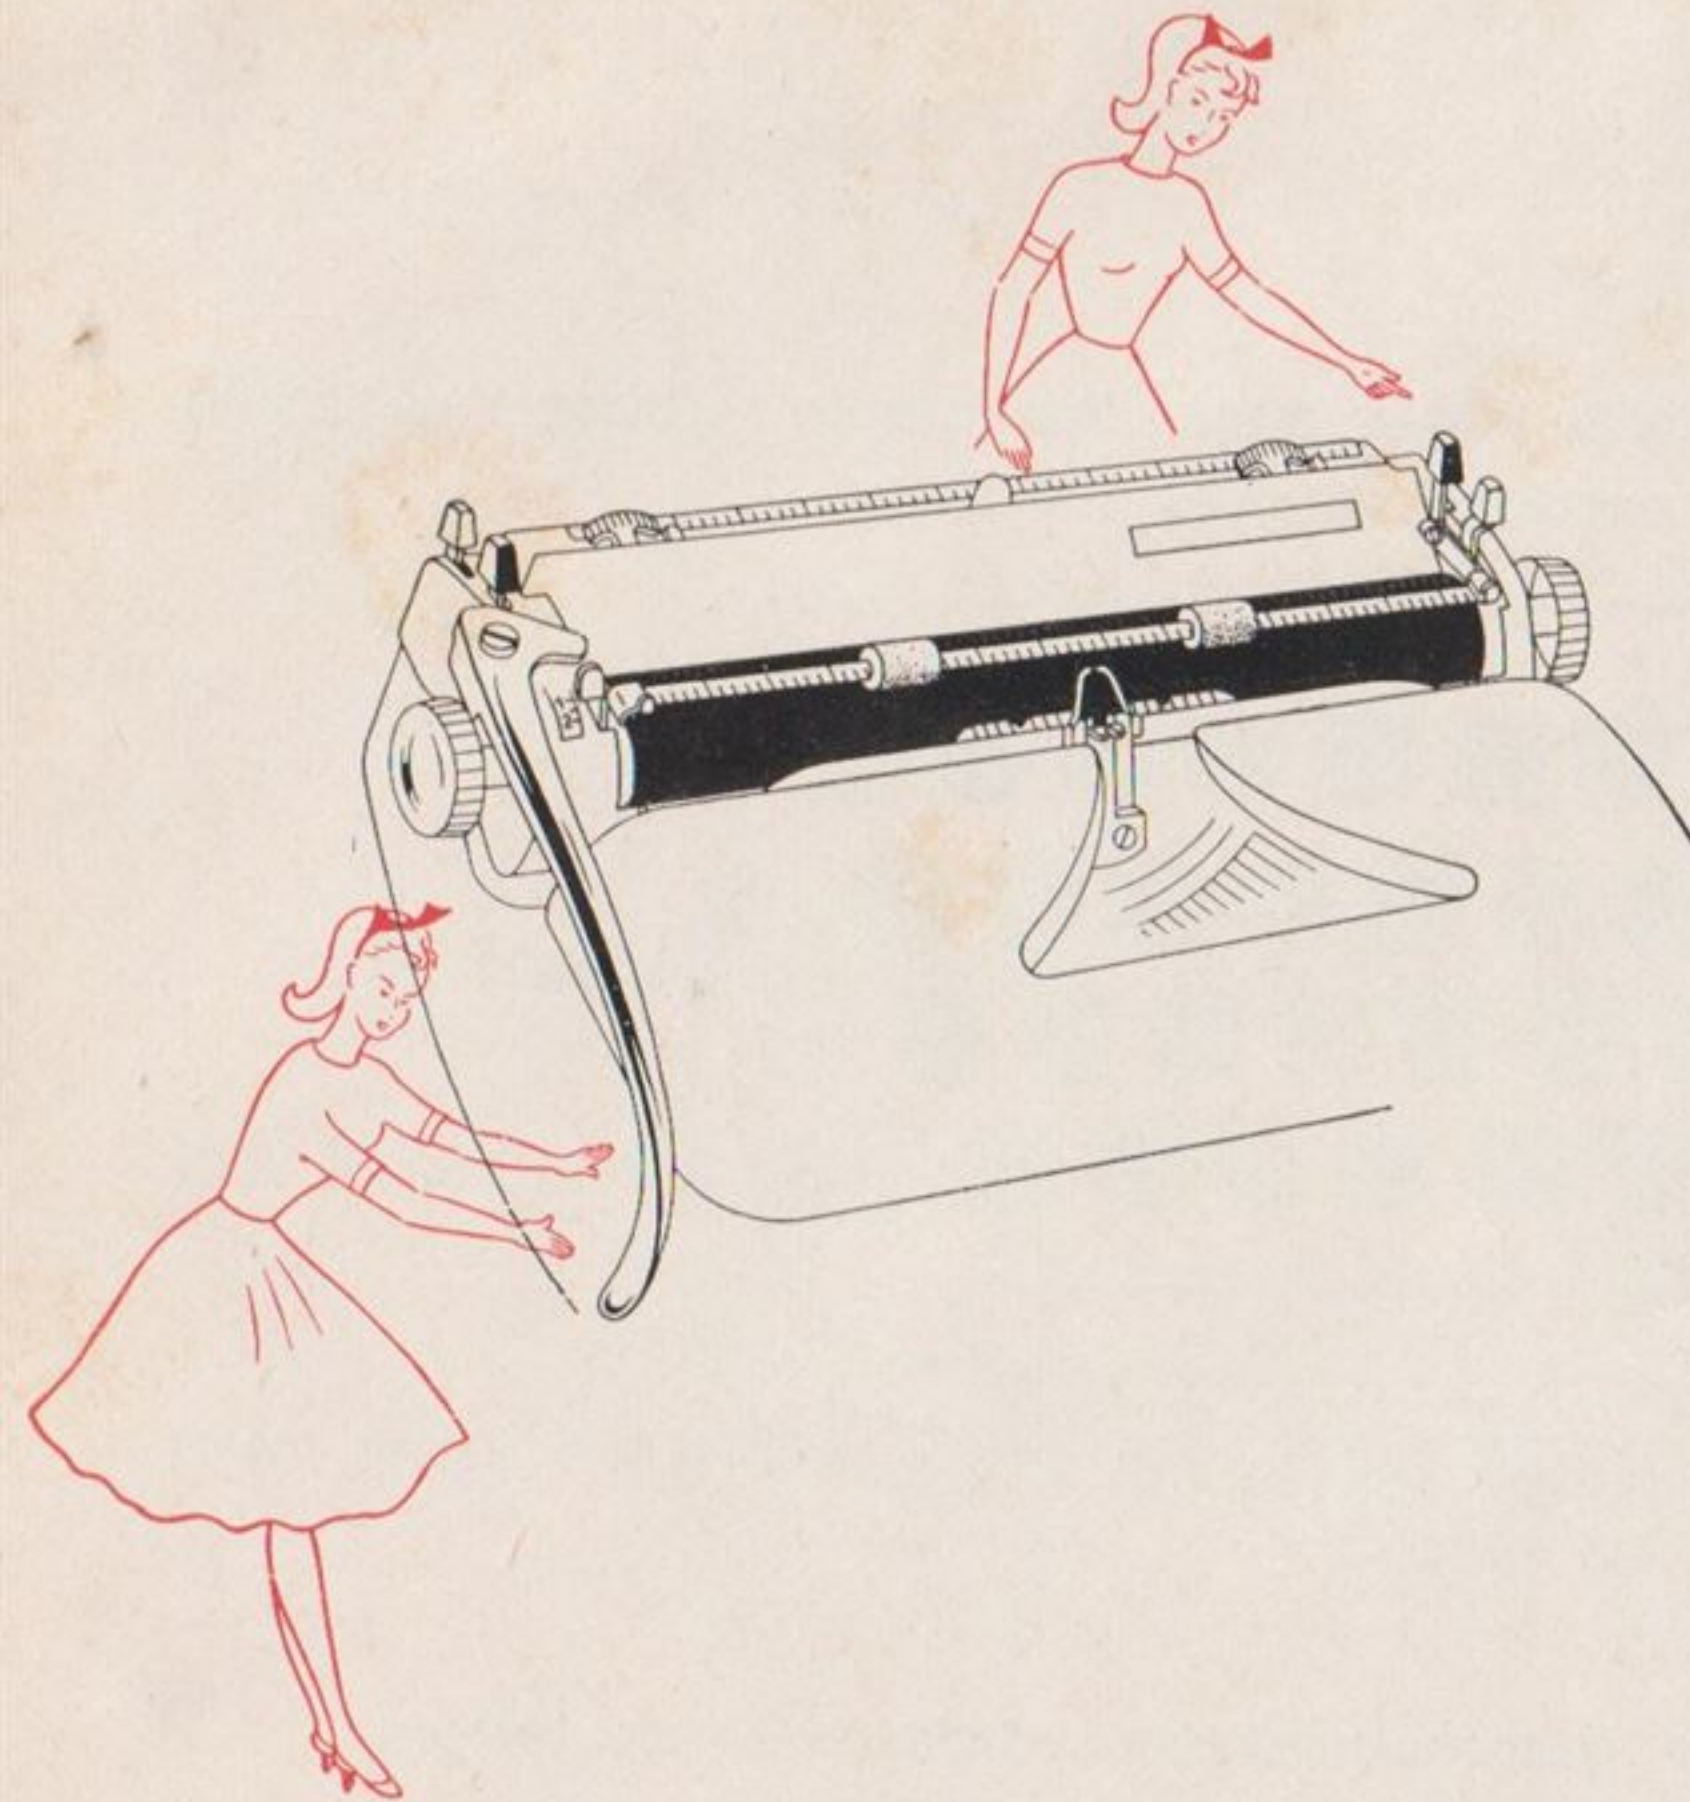

The dead key (accent key) should always be struck before the letter, over which the accent (sign) will be placed.

Space bar - for spaces between words or single letters.

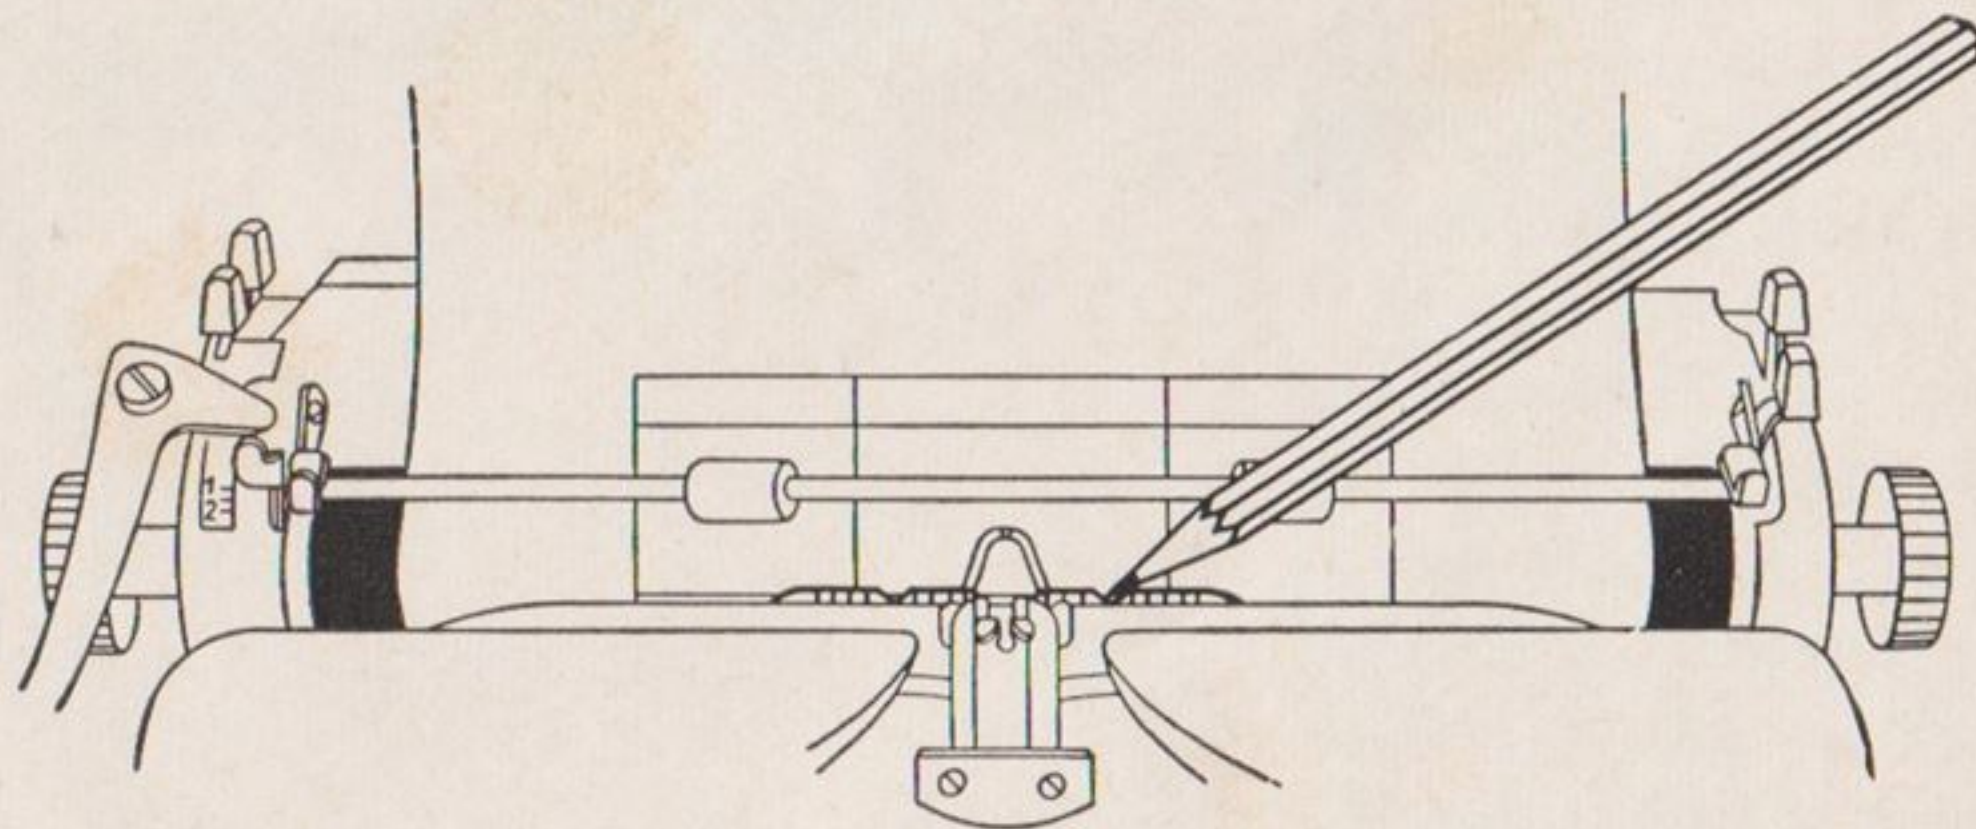

And now take courage and set to work!

Whenever you depress a key the carriage moves a space to the left. The end of the writing line is announced by a warning signal eight strokes before, then it is time to terminate this line. By actuating the line-space lever the platen will be changed to the next line and the carriage will be moved to the beginning of the writing line. The carriage can be moved to the left or right by the help of one of the two carriage-release levers.

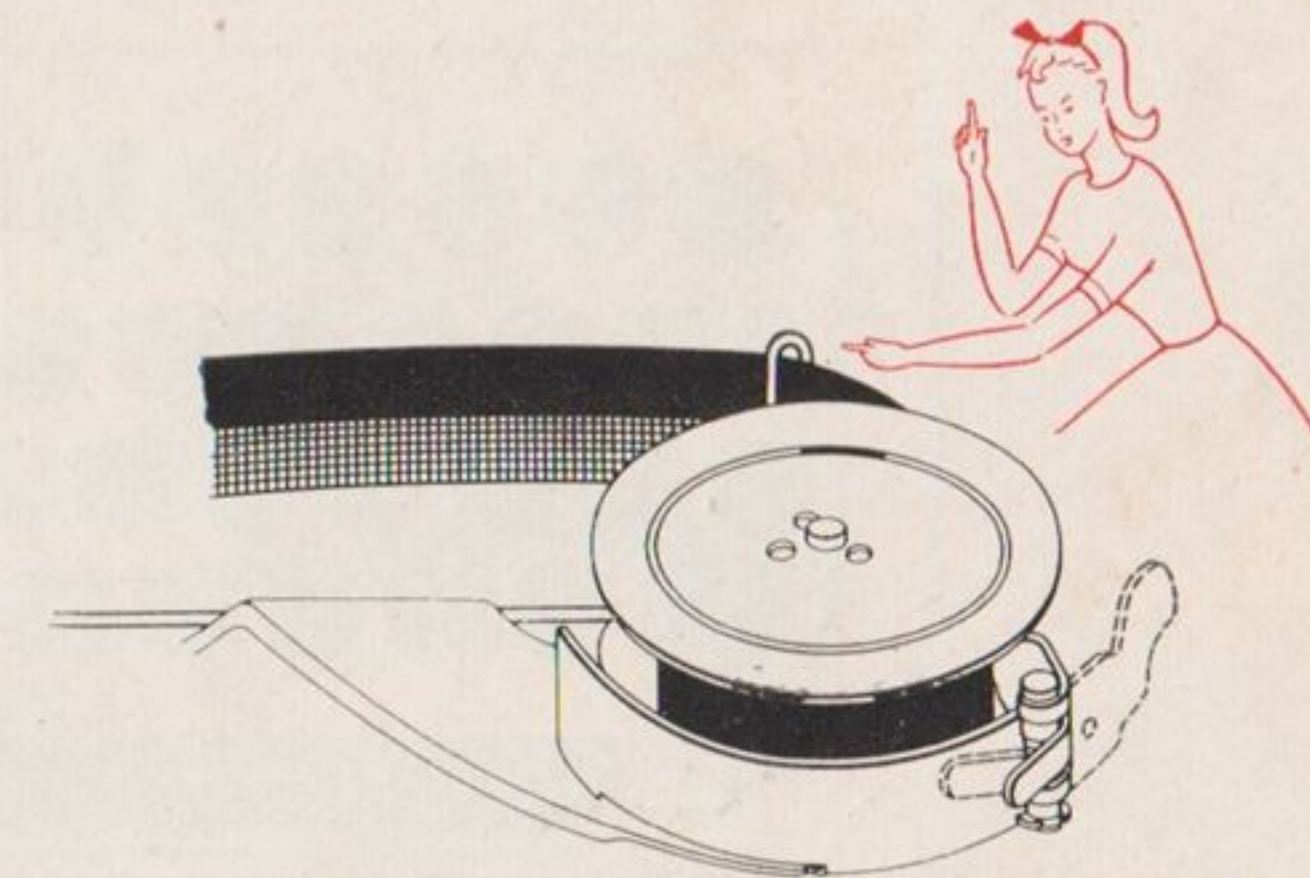

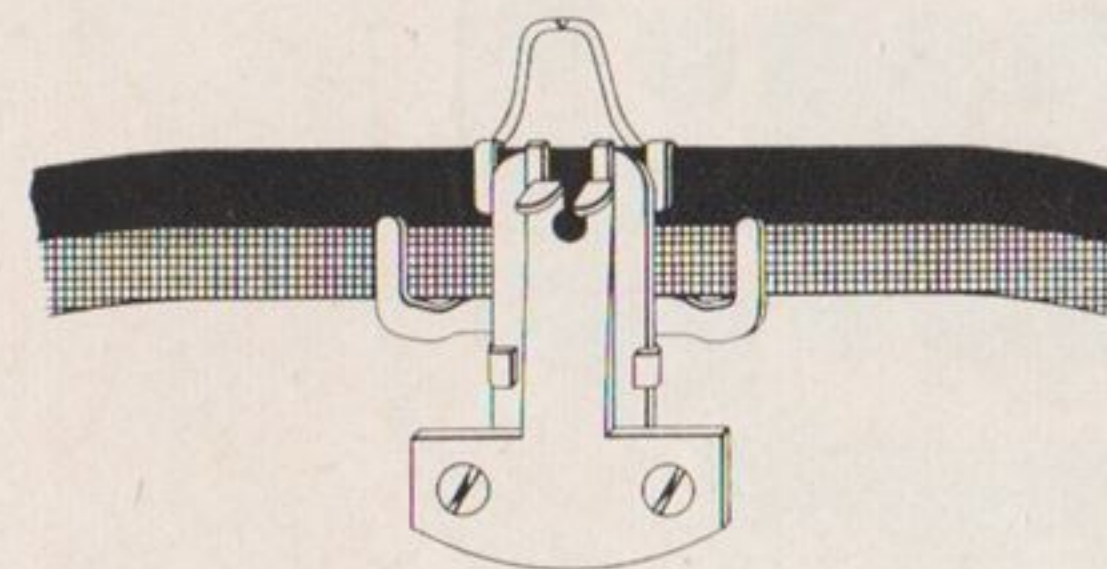

By drawing forth the line-space disengaging lever you release the locking of the platen, it can now be turned freely.

In order to enable you to utilize fully the paper down to the last line, "Junior" is provided with two devices, the positioning scales and the cardholder. But this is not the exclusive purpose; the white mark on the cardholder coincides with the center of each letter. So you can for instance easily find again the spot where a correction has been made and type the correct letter.

You can equally draw lines on the paper. — Insert the point of a pencil in the notch of the right- or left-hand positioning scales, — draw forth the carriage release lever — and move the carriage to the left or right to draw horizontal lines. To draw vertical lines use the line-space disengaging lever and rotate the platen.

As far as the ribbon is concerned this is a most simple matter. Normally you have to pay no attention whatsoever to the ribbon because "Junior" sees to it that the ribbon is automatically transported from one to the other spool. When changing the ribbon spools remove the cover exerting a light upward movement. To insert and take out the spools, push the braking lever outwards. All you need to do now is to insert the new ribbon as shown in the picture. The two ribbon reverse actuators which simultaneously guide the ribbon allow you to direct the transport.

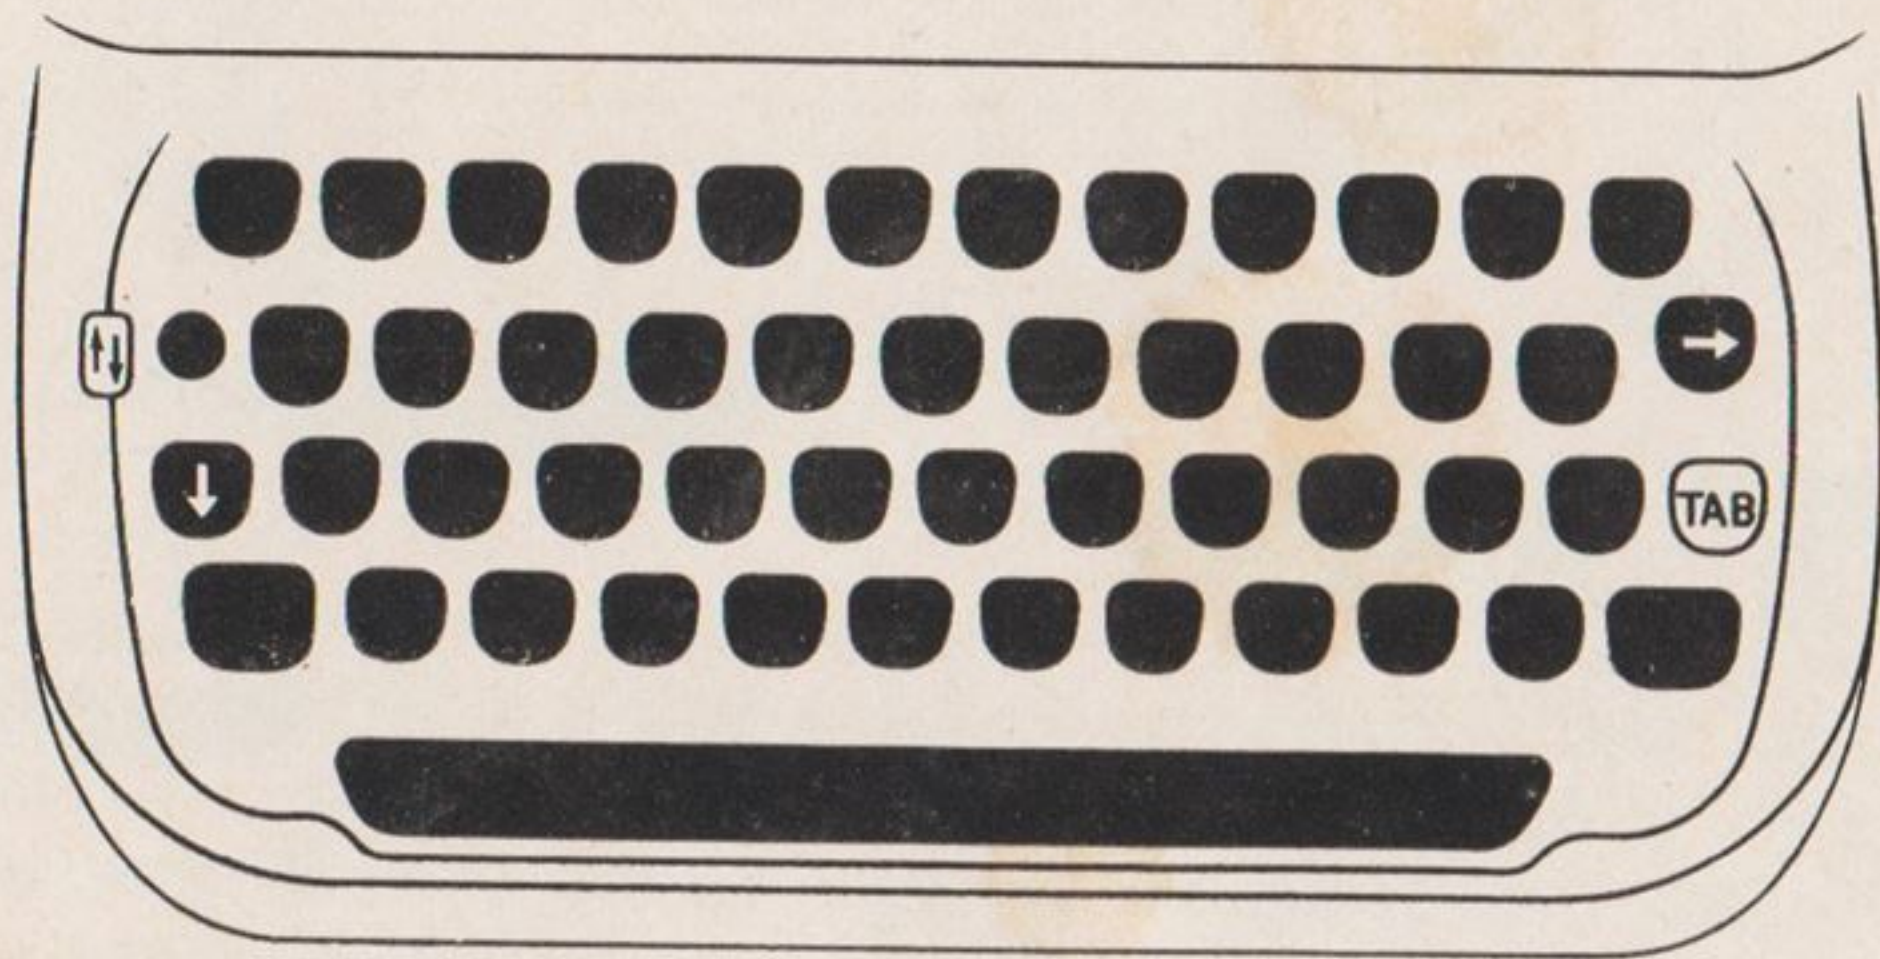

You can just as well insert a two colour ribbon, e. g., black/red.
The ribbon is to be placed in a way that the black zone comes to the top.

Blue arrow: The ribbon is adjusted for the black zone.

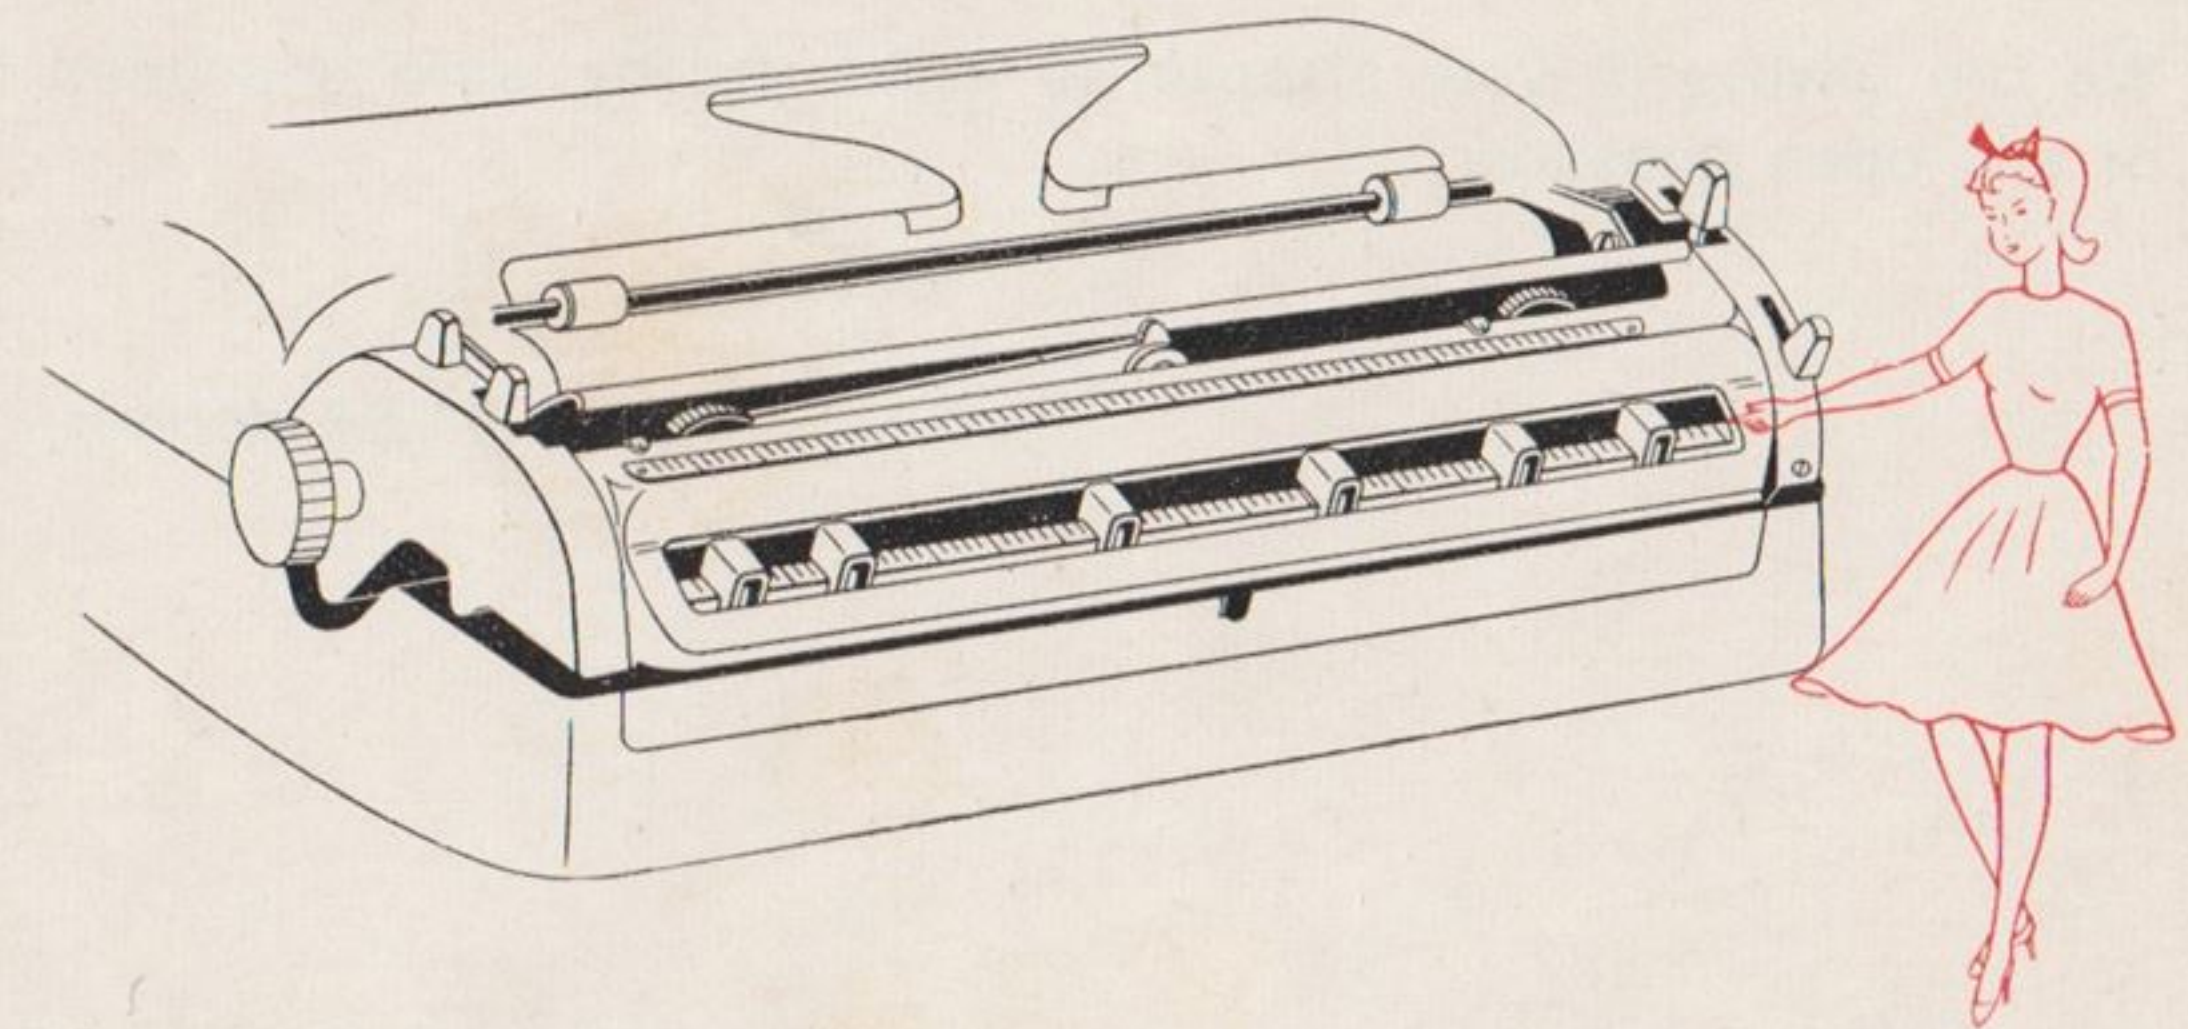

Central position: For writing stencils.

Red arrow: The ribbon is adjusted for the red zone.

"Junior" is equipped with a special device — the tabulator, which proves an invaluable help in cases where tables, lists etc. have to be typed neatly and quickly.

On the back of the carriage you will find a rail, provided with the same numbered scale as on the paper bail. On this rail 6 tabulator stops are mounted which can be displaced to either side by depressing the grooved handles. When setting the tabulator stops the side provided with a red mark must always coincide with the scale division where the carriage has to be stopped. Tabulator stops which are not needed and, therefore, are in your way, may be displaced to the left- or right-hand end position. The TAB-key being depressed, the carriage moves in accordance with the set stops and takes the predetermined position.

Our wish!

Please bear in mind that also "Junior" needs regular care and maintenance from the very beginning. Write without forcing the machine. When corrections are made, the carriage should be moved as far as possible to the right or left to keep eraser particles from falling into the machine. Clean from time to time the types with a brush in longitudinal direction. "Junior" will thank you with higher efficiency and neat writing.

We are always at your disposal to assist you by word and deed in case of still open questions,
